RAHUL SINGH

PRODUCT DESIGNER | UX RESEARCH AND PRODUCT ANALYTICS

Chicago, IL | (773) 394-3890 | rahuldash88@ymail.com | LinkedIn | Portfolio | Open to relocate

PROFILE

Product designer and mixed-methods researcher turning complex needs and technical constraints into products people can use. Owns strategy through implementation across AI, health, finance, and commerce, combining product judgment with research and analytics.

EXPERIENCE

Sr. Product Designer | Ganance Inc., Chicago, IL — Feb 2025 – Present

- Led product design for HEIR, a screenless activity tracker, from launch through feature expansion, adding new capabilities as the business **reached 3,000+ devices sold and 2,000 additional preorders**.
- Redesigned core app navigation and device controls, increasing cumulative **task success from 70% to 90.4%** and System Usability Scale (SUS) scores from **47.5 to 75.8** (old vs. new app) across independent studies.
- Analyzed feedback from 100 customers to identify the features they valued most, helping shift development priorities toward customizable notifications, silent alarms, and reminders. Subsequent analysis of 1,800 users found 81% had notifications enabled.
- Designed personalized daily activity goals that adapt to users' movement habits, **replacing generic step targets with achievable milestones**. **Collaborated with firmware engineers to turn imperfect sensor data into meaningful guidance**; analyzed behavioral data from 847 users to evaluate engagement and usage patterns.
- **Led end-to-end UX for a phone-camera health check** that estimates nine health measurements, including guidance for accurate scans, error recovery, and understandable results. **Created detailed designs and specifications** that enabled engineers to deliver the **initial iOS beta in seven days without major rework**.

Product Designer | Lira Technologies Corporation, Chicago, IL — Aug 2025 – Present

- **Refocused Lira's AI-pendant MVP on coordination between older adults and caregivers**, translating interviews into a product direction built around shared tasks, reminders, and calendars.
- **Turned the concept into a functional iOS demo**, linking pendant recordings with AI summaries, editable follow-ups, and Google/Apple Calendar integration to show the complete care-coordination journey.
- Designed checks on AI-generated actions—including source links, confidence cues, and confirmation—so people can review information before turning it into shared responsibilities.
- **Designed an 8-week field pilot for approximately 50 caregiving families**, pairing interviews and diaries with Datadog events to test recurring use and guide post-MVP product decisions.
- **Expanded product discovery into home health** with Orion, mapping nurse documentation and EHR handoffs to identify clinician-reviewed AI workflows worth piloting.

Product Designer | MytecSys IT Solutions, India — Jan 2021 – Dec 2022

- Redesigned loan applications for cooperative-bank field agents, increasing throughput 32% and reducing incomplete applications 27% through clearer validation and offline recovery.
- Reduced checkout friction for an artisan marketplace through funnel analysis and A/B testing; cart-to-checkout conversion rose 18% and abandonment fell 23%.
- Created responsive UI components and HTML/CSS prototypes that translated product requirements into implementation-ready handoffs for banking and e-commerce teams.

EDUCATION

M.S., Human-Computer Interaction | DePaul University, Chicago, IL | Jun 2025

B.B.A., Marketing | Dr. Ambedkar Institute of Management Studies and Research | 2018

SKILLS

Product Design: Product strategy, UX/UI design, interaction design, information architecture, mobile app design, prototyping, design systems, Figma

UX Research: Mixed-methods research, usability testing, interviews, surveys, diary studies, A/B testing, card sorting, tree testing, conjoint and MaxDiff analysis

Analytics & Technical: Product analytics, funnel analysis, data visualization, R (tidyverse, ggplot2), SQL, Mixpanel, Datadog, Qualtrics, HTML/CSS/JavaScript, React
